S Withheld due to extreme variability (sampling error is 20 percent or more).

Note: The sampling variability of the measures shown above except total operating receipts is the same as that shown in table 6 for the ratios of these measures to total operating receipts. Total operating receipts figures, based on complete coverage in the 1967 Census of Business, are not subject to sampling errors.

Detail will not add to totals because part year reporters are included in the kind of business totals but are not included in the detail by size class; also some size classes could not be shown separately because of extreme variability of the data.

* Represent a combination of two or more size classes; generally the individual size classes could not be shown separately because of extreme variability of the reported data.

GENERAL EXPLANATION

CENSUS COVERAGE

Method of Enumeration — Information for wholesale trade, except for number of employees and first quarter payroll of single-establishment firms, was obtained by a means of a mail canvass. First quarter 1967 payroll and mid-March employment information for single-unit employers were obtained from 1967 administrative records of the Internal Revenue Service and the Social Security Administration. Census wholesale trade report forms were mailed to all business firms included in the active records of the Internal Revenue Service as subject to payment of Federal Insurance Contributions Act (FICA) taxes which were classified in the records of the Social Security Administration (SSA) as wholesale trade (SIC industry group 50). Each establishment was mailed a report form appropriate to its SSA classification, but its census classification was determined by replies to questions on the census report form. In addition, a general purpose report form was mailed to all establishments which the SSA had not classified by kind of business prior to mailing of census report forms.

Type of Areas Covered — This series of reports presents data by kind of business for the following areas:

1. The State as a whole.
2. Each standard metropolitan statistical area.
3. Each county.
4. Each "city" of 5,000 inhabitants or more.

The term "city" for purposes of these reports includes places having 5,000 inhabitants or more in the 1960 Census of Population (or later special censuses) and which were incorporated as cities, boroughs, villages, or towns. It does not include towns in New England, New York, and Wisconsin which are not considered "incorporated places" for Census Bureau purposes.

In addition, data are shown for the following areas not classified as incorporated places:

1. Towns in the New England States which had a total population of 10,000 inhabitants or more in 1960, plus those towns with an urban population, by census population rules, of 2,500 inhabitants or more and which had a total population of 5,000 to 9,999.

2. Townships in New Jersey and Pennsylvania which had 10,000 inhabitants or more.

The standard metropolitan statistical areas (SMSA's) for which data are shown are those defined by the Bureau of the Budget in 1967.¹ A standard metropolitan statistical area is a county or group of contiguous counties (except in New England) which contains at least one central city of 50,000 inhabitants or more or twin cities with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, towns and cities rather than counties are the units used in defining an SMSA.

Comparison of the 1963 Census With the 1967 Census—In all major respects, the 1963 and the 1967 Censuses were conducted under similar conditions and procedures. Strict comparability of the data for the two censuses is limited by the following factors:

1. In 1967, data are presented for the number of paid employees as of mid-March and for first quarter payroll; in 1963, the number of paid employees and payroll were measured for the workweek ended nearest November 15 of that year.
2. First quarter 1967 payroll and the number of paid employees of single establishment firms were obtained from administrative records of the Internal Revenue Service, whereas in 1963 all census information was obtained directly from the companies.
3. Kinds of business for which 1967 data are shown in this report are in accordance with the 1967 edition of the Standard Industrial Classification Manual prepared by the Office of Statistical Standards of the Federal Bureau of the Budget, whereas the 1963 data were in conformity with the 1957 edition and supplements thereto. Adjustments have been made in the 1963 data for comparison purposes in table 1 of this report.
4. A change was made in the distinction between retail and wholesale lumber yards, 1967

compared with 1963. In 1967, yards reporting 1 percent or more of their total sales to home owners and the general public, provided that the sum of such sales plus sales to contractors and builders represented more than one-half of their total business, were classified as retail. In the 1963 Census of Business a minimum of 15 percent of sales to home owners and the general public, and the sum of such sales plus sales to contractors and builders equal to 50 percent or more of the total business, were required to qualify as retail.

EXPLANATION OF TERMS

Establishments—An establishment is a single physical location at which business is conducted. An establishment is not necessarily identical with the “company” or “enterprise” which may consist of one or more establishments. Census of Business figures represent a summary of reports for individual establishments rather than companies. A separate report was obtained for each location where business was conducted, including each location of multiunit organizations. Each report was tabulated in accordance with the physical location at which or from which the business was conducted.

Where two or more activities were carried on at a single location under a single ownership, all activities generally were grouped together as a single establishment and the entire establishment was classified on the basis of its major activity, with all data for it included in that classification. However, in cases where distinct and separate economic activities (for which different industry classification codes were appropriate) were conducted under the same ownership at a single location, and where conditions prescribed by the Standard Industrial Classification (SIC) Manual² for recognizing the existence of more than one establishment were met, separate establishment reports for each of the different activities were reported in the census.

The “number of establishments” shown in this report is the number in business at the end of the census year.

Sales—Sales include merchandise sold and receipts from repairs and from other services to customers whether or not payment was received in 1967. Sales are net of deductions for refunds and allowances for merchandise re-

turned by customers. Total sales exclude amounts other than those received from customers, such as income from investment, rental of real estate, etc. They include local and State sales taxes and Federal excise taxes collected by the wholesale establishment directly from customers and paid directly by the wholesale establishment to a local, State, or Federal tax agency. Gasoline, liquor, tobacco, and other excise taxes paid by the manufacturer and passed along to the wholesaler are also included.

Sales do not include wholesale sales made by manufacturers, retailers, service establishments or other businesses whose primary activity is other than wholesale trade. They do, however, include receipts other than from the sale of merchandise at wholesale (e.g., service receipts, retail sales, etc.) by establishments primarily engaged in wholesale trade.

Although the count of establishments in this report represents the number in business at the end of the year, the sales figures include sales of all establishments in business at any time during the year. Sales shown for agents and brokers represent the value of the goods involved in the transactions rather than commissions received or earnings.

Payroll, entire year—Payroll includes salaries, wages, commissions, bonuses, vacation allowances, and sick leave pay paid during the year to all employees. For corporations, it includes amounts paid to officers and executives; for unincorporated businesses it does not include compensation of proprietors or of partners. Payroll is reported before deductions for social security, income tax, insurance, dues, etc. This definition of “payroll” is the same as that used by the Internal Revenue Service for purposes of reporting on Form 941.

Payroll for the first quarter of 1967—This item consists of payroll, as defined above, paid to persons on the payroll during the January-March 1967 quarter.

Paid employees for the pay period including March 12, 1967—Paid employees consist of the number of employees, including salaried officers and executives of corporations, who were on the payroll in the pay period including March 12, 1967. Included are employees on paid sick leave, paid holidays, and paid vacations. Proprietors and partners of unincorporated businesses are not included. The definition of paid employees is the same as used in reporting on IRS Form 941.

TYPE-OF-OPERATION CLASSIFICATIONS

In addition to kind of business, each wholesale establishment was classified for census purposes by type of operation according to the ownership of the business, ownership of the goods sold, or character of principal transactions. Establishments in wholesale trade are grouped into five major type-of-operation classifications as shown below.

Merchant wholesalers—Establishments primarily engaged in buying and selling merchandise on their own account, including farm products merchants who do not buy primarily from farmers. Included here are such types of establishments as wholesale merchants or jobbers, industrial distributors, voluntary group wholesalers, exporters, importers, cash-and-carry wholesalers, wagon distributors, retailer cooperative warehouses, terminal grain elevators, and wholesale cooperative supply associations.

Wholesale merchants, distributors—Establishments primarily engaged in buying and selling merchandise in the domestic market and performing the principal wholesale functions—buying, stocking, selling, etc.

Importers—Establishments buying and selling goods at wholesale on their own account, whose principal source of purchases was foreign.

Exporters—Establishments primarily engaged in purchasing goods in the United States and selling to foreign customers.

Terminal grain elevators—Grain elevators primarily engaged in buying and selling grain received from county grain elevators and grain marketing establishments. These elevators have sizable space for grain storage and products are received primarily by rail or barge rather than by truck or wagon. Grain elevators buying and receiving products direct from farmers by truck or wagon were classified as farm products assemblers.

Manufacturers' sales branches and sales offices

—Establishments maintained by manufacturing and mining companies apart from their plants or mines for marketing their products at wholesale. Establishments with warehouses selling ferrous and nonferrous metals—metals service centers—are classified as merchant wholesalers. Manufacturers' branch houses selling electrical appliances primarily to retailers and builders are also classified as merchant wholesalers. Branch stores selling to household consumers and individual users are classified in retail trade. Sales branches and sales offices located at plants and at administrative offices are included when separate records are available. In some tables data are shown separately for manufacturers' sales branches and for sales offices. These two types of establishments differ in that sales offices normally do not carry stocks of merchandise for delivery to consumers.

Petroleum bulk stations, terminals, LP gas facilities—Establishments primarily engaged in the wholesale marketing of gasoline, kerosene, distillate and residual fuel oils, liquefied petroleum gases, and other bulk petroleum products. These establishments have facilities for bulk storage of petroleum products and are primarily engaged in selling to retailers, to industrial accounts, and to other distributors.

In some tables separate data are presented for—

Refiner-marketer bulk stations, terminals.
Other bulk stations, terminals.

Merchandise agents and brokers—Establishments whose operators are in business for themselves and are primarily engaged in selling or buying goods for others. Included here are such types of operations as auction companies, commission merchants, export agents, import agents, selling agents, and merchandise brokers. "Sales," as shown in census publications for agents and brokers, represent the gross sales (or purchase) value of the goods in the transactions negotiated.

Auction companies—Wholesale establishments primarily engaged in selling merchandise on an agency basis by the auction method.

Merchandise brokers—Wholesale establishments primarily engaged in selling or buying merchandise in the domestic market on a brokerage basis, but not receiving the goods on consignment.

Commission merchants—Wholesale establishments operating on the domestic market receiving goods for sale on consignment.

Import agents—Merchandise agents and brokers in the domestic market buying merchandise from or selling merchandise for foreign firms.

Export agents—Merchandise agents and brokers in the domestic market selling to or buying for foreign customers.

Manufacturers' agents—Wholesale establishments in the domestic market selling for a limited number of manufacturers on a continuing agency basis.

Selling agents—Wholesale establishments primarily engaged in selling, on an agency basis in the domestic market, all or the major portion of the output of clients.

Purchasing agents, resident buyers—Wholesale establishments primarily engaged in buying merchandise on an agency basis, in the domestic market, for a limited number of customers on a continuing basis.

Farm products assemblers—Country grain elevators, cream and produce stations, fruit and vegetable packing houses, live stock concentration yards, and other establishments primarily engaged in purchasing from farmers and assembling and marketing farm products.

Country grain elevators—Grain elevators, cooperative or other, buying and receiving grain direct from farmers by truck or wagon and selling at wholesale.

Other assemblers of farm products—Establishments, not elsewhere classified, buying farm products primarily from farmers and marketing at wholesale. Included here are cream and produce stations; commission buyers of farm products; fresh fruit, vegetable packing houses; livestock concentration yards; and other assemblers of farm products, not elsewhere classified.

KIND-OF-BUSINESS CLASSIFICATIONS

Wholesale trade, as defined in major group 50 of the 1967 edition of the SIC Manual, and as covered in the 1967 Census, includes establishments or places of business primarily engaged in selling merchandise to retailers; to institutional, industrial, commercial, and professional users; or to other wholesalers; or in negotiating as agents in buying merchandise for or selling merchandise to such persons or companies. Importers selling merchandise at wholesale in the United States market and exporters are included in wholesale trade.

Establishments covered by the census were assigned a kind-of-business classification in accordance with the provisions of the 1967 edition of the SIC Manual. However, because in some instances a more detailed classification is required for census purposes than is available in the SIC Manual, additional kinds of business have been identified within the SIC categories.

It should be noted that kind-of-business classifications are not interchangeable with commodity classifications. Most businesses sell a number of kinds of commodities. The kind-of-business code assigned generally reflects either the individual commodity or commodity group which is the primary source of the establishment's receipts or some mixture of commodities which characterizes the establishment's business. Thus, the classification of establishments by kind of business generally does not make it possible to determine either the number of establishments selling a particular commodity or the sales of that commodity.
